

CANON PROSTREAM 1800

Ultra High Speed Web Inkjet Press

The innovation continues at DS Graphics/Universal Wilde. We are thrilled to introduce the Canon ProStream 1800 to our press lineup.

The ProStream 1800 pushes the boundaries of high speed inkjet print quality and media versatility.

SPEED:

The ProStream 1800 can run at a staggering 436' per minute with its twin duplexing, four color inkjet units. The faster speed translates to reduced time to market and cost.

QUALITY:

The Canon DigiDot Inkjet system produces quality unlike anything you have seen coming off a web inkjet device before. At full speed, the ProStream leverages 1,200 dpi resolution with Canon multi-level ink drop size modulation for smooth shadings, striking details in dark tones, and sharp fonts. Canon's Inline Quality Control also provides automatic print quality assurance. Consistent, near offset print quality is now a reality in the high speed variable content world.

FLEXIBILITY:

The ProStream allows for flexibility across a the widest range of media of any device in the web inkjet market, including standard offset coated (gloss, matte, silk, dull), uncoated, and inkjet optimized papers from 27# text all the way to 12pt cover.

Canon ProStream at a glance

- Print Speed: 436 ft/min duplex color
- Resolution: 1200 x 1200 dpi
- Max Print Width: 21.39"
- Print Length: 19" current configuration
- Paper Range: 27# text - 12pt cover
